

**Chittenden County All-Hazards Mitigation Plan Review/Update Committee  
Meeting Agenda**

*RSVP to Dan Albrecht (846-4490 x29; dalbrecht@ccrpcvt.org) to confirm whether you will or will not attend.*

Date: **Wednesday, May 13, 2015**  
Time: **2:30 p.m. – 4:30 p.m.**  
Location: **Main Conference Room, CCRPC Offices, Winooski**

1. **Call to Order, Introductions and Changes to the Agenda** (Information, 5 minutes)
2. **Public comments on items not on the Agenda** (Information, 5 minutes)
3. **Project Background, Update Process and timeline** (Information, 10 minutes)

Staff will review the purpose of the AHMP and the process for updating the Plan and the municipal annexes prior to August 2016.

4. **Review Hazard Identification List** (attachment) (Action, 15 minutes)

Please review the attached list of assessed hazards identified in the 2011 All Hazards Mitigation Plan and be prepared to discuss possible additions or deletions to the list, justification for the proposed change, and potential data sources. *The Committee will be asked to decide on whether specific changes to be made to this list.*

5. **Review Risk Estimation discussion and scoring matrix** (attachment) (Action, 30 minutes)

Please review the attached excerpt from the 2011 Plan that uses various criteria and ascoring system to estimate the risk for each of the identified hazards and prioritize hazards for mitigation. Be prepared to discuss the criteria and scoring. *The Committee will be asked to decide on any specific changes should to the risk estimation criteria and/or scoring methodology.*

**BREAK ( 15 minutes )**

6. **Review Mitigation Strategies** (attachment) (Action, 30 minutes)

Please review the Mitigation Strategies table shown in the attached excerpt from the *2011 Plan*. Be prepared to discuss:

- a. Should each of these strategies should still be a priority for the region?
- b. Which strategies should be modified to reflect progress or new developments?
- c. Should any new strategies should be included as priorities for the region?

*The Committee will be asked to decide on any specific changes to be made to the regional mitigation strategies.*

7. **Next Steps** (Information, 10 minutes)

Staff will outline the next steps for the *2016 Plan* update, including:

- a. How municipalities will be involved in updating their specific municipal annex
- b. Do we maintain college appendices (UVM, Champlain College and St. Michaels College)
- c. Committee review of draft changes to Plan
- d. Agency review of draft *2016 Plan*
- e. *2016 Plan* adoption process: review by municipalities, VDEMHS and FEMA

**Adjourn**

**Excerpt from 2011 Chittenden County Multi-Jurisdictional All-Hazards Mitigation Plan:**

**6.3 Updating the Chittenden County Multi-Jurisdictional All Hazards Mitigation Plan and Municipal Annexes**

FEMA regulations require that the All Hazards Mitigation Plan be updated, adopted and approved every five years in order for jurisdictions to maintain eligibility for pre-disaster mitigation funding. This five-year update cycle helps ensure that the plan remains current and relevant.

CCRPC anticipates that the following plan update procedure will be followed:

1. CCRPC will seek pre-disaster mitigation grant or other grants to fund the plan update.
2. CCRPC will convene an All-Hazards Mitigation Plan Update Committee. Representatives appointed by each municipality's governing body, one or more representatives appointed by LEPC #1, one or more commissioner representatives of CCRPC, and ex-officio officials from VEM and Vermont ANR will be invited to serve on the committee.
3. The Plan Update Committee will review the annual summary monitoring and evaluation reports. The Committee will also review the Plan's identified hazards, the hazard evaluation process, and the multi-jurisdictional mitigation strategies to determine whether they are still appropriate, or whether modifications or additions are needed based on current knowledge and conditions.
4. Based on Committee input, CCRPC staff will update relevant data in the Plan and prepare a draft Plan update. CCRPC will convene a second meeting of the Review/Update committee to review the draft Plan update. The Committee will reach consensus on changes to the draft Plan update and the format of the municipal annexes. In the event no consensus is reached, a vote by a simple majority of the Committee voting members present will decide.
5. CCRPC will incorporate the changes as recommended by the Committee and then work with municipal staff and officials to update their individual annexes to accurately reflect the municipality's current hazard mitigation concerns and recommended municipal goals and actions.
6. CCRPC will schedule a public presentation to each municipal governing body in order to formally present the draft update of the Multi-Jurisdictional Plan and to the municipal annex. Each governing body may provide, if it chooses, recommendations for further changes to the updated Multi-Jurisdictional Plan and to its individual annex.
7. The public may observe the presentations and provide comments, if desired, on the Multi-Jurisdictional Plan and the individual municipal annexes. The draft updated plans will be posted on the CCRPC website for public review and comment.
8. CCRPC staff will incorporate the public and municipal comments into the Multi-Jurisdictional Plan and the individual municipal annexes.

9. CCRPC may submit the Multi-Jurisdictional Plan and municipal annexes to FEMA Region I for approval pending adoption.
10. CCRPC staff will finalize the changes to the Multi-Jurisdictional Plan and the annexes and distribute these to CCRPC, LEPC #1, and municipal governing bodies for consideration of a resolution of re-adoption. Upon adoption by CCRPC, LEPC#1 and within three months of the time that the CCRPC has finished presentations to all of the municipal governing bodies, CCRPC will submit the updated Plan to FEMA Region I along with copies of the annexes adopted to date.

A municipality may choose not to re-adopt the updated Multi-Jurisdictional Plan and its respective local annex, recognizing that they may no longer use the updated Plan and annex to be eligible for FEMA hazard mitigation grants. A municipality may choose to develop, adopt and submit its own Local All-Hazards Mitigation Plan to FEMA Region I, consistent with the requirements of the *Disaster Mitigation Act of 2000* and regulations contained in 44CFR201 & 206 in order to maintain eligibility.

#### **6.4 Incorporation into Existing Planning Mechanisms**

The All-Hazards Mitigation Plan was used as a source when updating the Chittenden County Regional Plan in 2006. The 2006 Regional Plan contained a new Public Safety chapter, the text and stated goals of which relied heavily on the All-Hazards Mitigation Plan.

The mitigation strategies contained in this Plan can be incorporated into CCRPC's future planning mechanisms in two primary ways:

The Chittenden County Regional Plan – CCRPC's process for updating the *Chittenden County Regional Plan* will consider and incorporate as appropriate the data, analyses and mitigation strategies of this All Hazards Mitigation Plan.

The CCRPC annual Work Program – CCRPC will consider and incorporate mitigation strategies and actions into its annual Work Program, contingent on sufficient resources being available.

Opportunities exist for municipalities and other entities to incorporate this Plan's mitigation strategies into their own planning mechanisms, including but not limited to:

- Municipal comprehensive plans
- Municipal capital budgets
- Municipal zoning bylaws and subdivision regulations
- Municipal permitting processes (e.g., zoning permits, subdivision approvals, site plan reviews, road access permits, etc)
- Redevelopment plans
- Transportation improvement programs
- Open space preservation programs
- Mutual aid agreements

Some of the mitigation strategies in this Multi-jurisdictional All Hazards Mitigation Plan and the municipal annexes specifically identify actions to incorporate mitigation strategies into other

planning mechanisms. Other opportunities may become apparent when the strategies are implemented. The ability of municipalities and other entities to incorporate this Plan's mitigation strategies into other planning mechanisms is contingent on adequate funding and staffing resources.

## Timeline: Updating the All-Hazards Mitigation Plans (AHMPs) Multi-Jurisdictional (County) and Municipal Annexes (local plans)

## 2011 All-Hazards Mitigation Plan: hazards assessed for risk estimation

### **Natural**

- Drought
- Flooding
- High Winds
- Landslide
- Lightning
- Multi-structure Urban Fire
- Wildfire
- Winter Storm
- Radiological (Natural)

### **Technological**

- Gas Service Loss
- Hazardous Materials Incident
- Power Loss
- Radiological Incident
- Sewer Service Loss
- Telecommunications Failure
- Water Service Loss
- Major Transportation Incident
- Military Ordnance Incident

### **Societal**

- Crime
- Civil Disturbance
- Terrorism
- Epidemic
- Economic Recession
- Key Employer Loss

### *Other hazards discussed in report but not included in risk estimation matrix:*

- Earthquake
- Tornadoes and Hurricanes
- Hail
- Climate Change
- Ice Jams
- High Hazard Dams
- Inundations, Floodplains, and the NFIP
- Fluvial Erosion
- Pollution Event
- Several categories of Hazardous Substances hazards
- Several categories of Transportation Incident
- Food Supply Crisis

Each town has had a declared disaster; however, analysis of this table reveals some interesting differences between different areas of the County. The four non-lakeshore floods from 1990 through 1996 primarily affected the more upland municipalities, the gravel and dirt roads of which were vulnerable to washout. The unique flooding in July of 1998, caused by a rare combination of heavy summer rains falling on ground still saturated from the January ice storm and subsequent snowfall, affected both metropolitan and rural communities. Excluding the two somewhat anomalous events of the lakeshore flooding of 1993 (caused by a confluence of extremely high lake levels and strong onshore winds) and the July 1998 flooding (aggravated by saturated soil from the January Ice Storm), the urban and suburban communities of the county with their paved roads, lack of significant hills or small mountains and more developed stormwater systems, suffer flood damages less often and less severely. The lowland distribution of the 1998 Ice Storm is evident. Municipalities in the hills and mountains of the county had temperatures below the freezing point during that event.

### 3.4 Future Events

Although estimating the risk of future events is far from an exact science, CCRPC staff used best available data and best professional judgment to conduct an updated Hazards Risk Estimation analysis, which was subsequently reviewed and revised by the Plan Review/Update Committee in 2009. This analysis assigns numerical values to a hazard's affected area, expected consequences, and probability. This quantification allows direct comparison of very different kinds of hazards and their effect on the county, and serves as a rough method of identifying which hazards hold the greatest risk. CCRPC staff applied the following scoring system:

Area Impacted, scored from 0-4, rates how much of the municipality's developed area would be impacted.

Consequences consist of the sum of estimated damages or severity for four items, each of which are scored on a scale of 0-3:

- Health and Safety Consequences
- Property Damage
- Environmental Damage
- Economic Disruption

Probability of Occurrence (scored 1-5) estimates an anticipated frequency of occurrence.

To arrive at the overall risk value, the sum of the Area and Consequence ratings was multiplied by the Probability rating.

#### 3.4.1 Future Natural Hazard Events

According to the updated Hazard Risk Estimation analysis (*Table 3-2*) the following natural hazards received the highest risk ratings out of a possible high score of 80 and are considered significant and worth mitigating against.

- Severe Winter Storm (45)
- Flooding (32)
- Fluvial Erosion (24)
- Multi-Structure Urban Fire (16)

Previous FEMA disaster relief funds were used both to address Severe Winter Storm and Flooding Events, which occurred at least once in every municipality. The *2005 All Hazard Mitigation Plan* combined Fluvial Erosion with Landslides. Based on increased awareness of fluvial erosion and the consequences of erosion damage to roads or bridges, fluvial erosion is now being addressed separately. The potential damage from a major urban or multi-structure fire is relatively high in certain municipalities given the aging housing stock in the area and the lack of adequate building inspection.

Table 3-2 Natural hazard risk estimation matrix

|                                                                                                                                                                                                                                                           | Drought | Flooding | High Winds | Landslide | Fluvial Erosion | Lightning | Multi-Structure Urban Fire | Wildfire | Winter Storm | Radiological (Nuclear) |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----------|------------|-----------|-----------------|-----------|----------------------------|----------|--------------|------------------------|
| <b>Area Impacted</b><br>Key:<br>0 = No developed area impacted<br>1 = Less than 25% of developed area impacted<br>2 = Less than 50% of developed area impacted<br>3 = Less than 75% of developed area impacted<br>4 = Over 75% of developed area impacted | 0       | 1        | 1          | 0         | 1               | 1         | 1                          | 0        | 4            | 1                      |
| <b>Consequences</b>                                                                                                                                                                                                                                       |         |          |            |           |                 |           |                            |          |              |                        |

### 3.4.2 Future Technological Hazard Events

According to the updated Hazard Risk Estimation analysis (Table 3-3), the following technological hazards received the highest risk ratings out of a possible high score of 80 and are considered significant and worth mitigating against.

- Telecommunications Failure (30)
- Power Loss (28)
- Major Transportation Incident (28)

As discussed in Section 1, large portions of Chittenden County are urban or suburban in nature, and much of its population is dependent upon municipal services such as water, sewer, electricity and gas. Losses of these services could therefore deprive many individuals, including vulnerable populations such as the elderly, of basic human needs.

CCRPC has had limited success in identifying “trouble spots” that have repeated occurrences of service outages or downed lines. VT Department of Public Service requires electric companies to report outage data (day, time, duration, general street location and determined cause. However, an exact location (i.e., near which exact utility pole) is not provided. Therefore, at this time, CCRPC cannot detail the geographic area with repeated service losses nor provide any detailed information on the likely frequency of future events.

Small scale transportation incidents—accidents involving a small number of vehicles—occur with relative frequency in Chittenden County, and can result in fatalities. However, the transportation incident rating in the risk estimation matrix concerns rarer, large-scale events. These could include an airline crash, an incident with a passenger ferry or large boat, a rail incident, a roadway accident involving a large number of vehicles, or major road infrastructure failure. Although the potential impacts are high, the rarity of such transportation events makes it difficult to identify specific geographic areas where such large transportation accidents are likely to occur.

Table 3-3 Technological hazard risk estimation matrix

|                                                                                                                                                                                                                                                           | Gas Service Loss | Hazardous Materials Incident | Power Loss | Radiological Incident | Sewer Service Loss | Telecommunications Failure | Water Service Loss | Major Transportation Incident | Military Ordnance Incident |

### 3.4.3 Future Societal Hazard Events

According to the Hazard Risk Estimation analysis (Table 3-4), the following societal hazards received the highest risk ratings out of a possible high score of 80 and are considered significant and worth mitigating against:

- Epidemic (21)

- Crime (16)
- Civil Disturbance (16)

For the most part, the risk of Societal Hazards is less than that of Natural and Technological Hazards. The exception to this is the risk of an epidemic. While epidemics are rare, they do have the potential of mass casualties and significant economic disruption over a wide area. Appropriately, efforts have been made in recent years on the county and municipal levels to mitigate the hazards associated with an epidemic, though most pandemic mitigation still takes place at the state or federal level. The recent swine flu pandemic raised public awareness of epidemics, even though few cases were reported in Vermont.

Table 3-4 Societal hazard risk estimation matrix

|                                                                                                                                                                                                                                                           | Crime | Civil Disturbance | Terrorism | Epidemic | Economic<br>Recession | Key Employer<br>Loss |

### 3.4.4 Summary of Future Hazard Events

Based on this risk estimation analysis, the highest rated hazards for Chittenden County are:

- Severe Winter Storm (45)
- Flooding (32)

- Telecommunications Failure (30)
- Power Loss (28)
- Major Transportation Incident (28)
- Fluvial Erosion (24)
- Epidemic (21)

It should be noted that the top natural hazard on the list—severe winter storm—could be the cause of two of the highest-rated technological hazards, telecommunications failure and power loss. The current swine flu pandemic has not significantly affected Chittenden County but has raised local awareness of the potential risks of an epidemic. This partially accounts for epidemic being the highest ranking social hazard.

*Table 3-5* shows the distribution of significant hazards for each municipality. This table represents the subjective opinion of officials from each municipality, either based on direct municipal input or on the highest-rated hazards from the municipal annex. As a result, this assessment of relative risk and/or significance is not consistent from community to community. However, the table does illustrate which issues are of most importance to each municipality.

Table 3-5 Significant hazards, by municipality, Chittenden County, Vermont.

It is important to remember that the significance of a hazard is a function of its frequency and the amount of damage it might cause. Some hazards, such as drought, can occur every few years in the county, but effects are usually limited to farmers and a few individual homeowners being without well water because of a temporary low water table. A major urban fire encompassing several structures is not a common event but has the potential to cause serious damage.

## Excerpt from 2011 Chittenden County Multi-Jurisdictional All-Hazards Mitigation Plan:

### 6.5 Implementation and Monitoring of Mitigation Strategies

The following table will aid responsible entities in implementing the mitigation actions for Chittenden County, and facilitate annual monitoring of the plan.

Table 6-1 Chittenden County Multi-Jurisdictional All-Hazards Mitigation Plan Implementation Matrix

| Mitigation Strategy                                                                                                                     | AHMP Page # | Primary Responsible Entity                                 | Task                                             | Brief Description                                                                                                                                                                             | Progress (Initial staff comments, March 31, 2015)                                                                                                                                         |

|                                                                                                                                         | 82          | Municipalities (see annex for specific responsible entity) | Fluvial Erosion Hazard Mitigation Implementation | Develop strategies to mitigate losses from identified fluvial erosion hazards.                                                                                                                | Municipalities are incorporating discussions of FEH and Flood Resiliency in their comprehensive plans and working to formally address FEH and River Corridor Protections in their bylaws. |

Agenda #6

| Mitigation Strategy                                                                                                                                                  | AHMP Page # | Primary Responsible Entity                                 | Task                                                                  | Brief Description                                                                                                                                                                                                | Progress (Initial staff comments, March 31, 2015)                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------------------------------------------|-----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| #2, continued.                                                                                                                                                       | 82          | CCRPC, VT ANR                                              | Flood Insurance Map Updates                                           | Assist ANR in conducting outreach to municipalities on the Draft FIRM data, solicit input to the final revisions, and provide assistance to municipalities in updating floodplain regulations and zoning bylaws. | Completed                                                                                                                                                                   |
| #3 Evaluate capabilities of existing road and stormwater infrastructure                                                                                              | 83          | VT ANR, VTrans, CCRPC, CCMP                                | Infrastructure Assessment for Stormwater Vulnerability                | Assess the vulnerability and operational capability of municipal-owned roads, culverts and other stormwater infrastructure in areas with recurring stormwater and snowmelt problems.                             | CCRPC is working on an analysis tool to collate information from various data sources to facilitate prioritization of repair and/or replacement of infrastructure.          |
|                                                                                                                                                                      | 84          | VT ANR, VTrans, CCRPC, CCMP                                | Infrastructure Assessment for Fluvial Erosion/Landslide Vulnerability | Assess the vulnerability and operational capability of municipal-owned roads, culverts, bridges and other infrastructure to fluvial erosion and landslide events.                                                | CCRPC is working on an analysis tool to collate information from various data sources to facilitate prioritization of repair and/or replacement of infrastructure.          |
| #4 Develop a regional climate action guide with goals and strategies to help reduce energy consumption, reduce greenhouse gas emissions and mitigate climate change. | 84          | CCMP; CCRPC                                                | Energy and Climate Action Guide                                       | Research and develop an Energy and Climate Action Guide for Chittenden County and its municipalities.                                                                                                            | Completed                                                                                                                                                                   |
| #5 Complete landslide hazard assessments and develop strategies in response to identified risks.                                                                     | 85          | VGS, CCRPC                                                 | Landslide Hazard Assessment Protocol                                  | Develop a landslide hazard protocol to evaluate county slopes and waterways.                                                                                                                                     | Completed by Vermont Geological Survey with CCRPC as partner. Protocol development testing included the towns of Essex, South Burlington, Colchester, Bolton and Shelburne. |
|                                                                                                                                                                      | 85          | CCRPC, VGS                                                 | Landslide Hazard Assessment and Mapping                               | Assess landslide hazards and prepare landslide hazard maps.                                                                                                                                                      | Other than the mapping described in the previous row, no funding has been secured to prepare additional maps.                                                               |
|                                                                                                                                                                      | 85          | Municipalities (see annex for specific responsible entity) | Landslide Hazard Mitigation Implementation                            | Develop strategies to mitigate losses from identified landslide hazards.                                                                                                                                         | No action taken to date. For the towns identified above, the 2016 updates to their individual AHMPs will include such strategies.                                           |

| Mitigation Strategy                                                                                                                                                                             | AHMP Page # | Primary Responsible Entity | Task                                         | Brief Description                                                                                                                                            | Progress (Initial staff comments, March 31, 2015)                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| #6 Identify data gaps that affect all-hazards mitigation planning and develop multi-0partner research projects to address identified data needs.                                                | 87          | LEPC #1                    | Hazardous Materials Transportation           | Identify recent studies and current state databases to help identify hazardous materials transport and transportation-related hazardous materials incidents. |                                                                                                                    |
|                                                                                                                                                                                                 | 87          | CCRPC, LEPC #1             | Hazard Mitigation Planning by Other Entities | Identify hazard mitigation planning being done by other entities in Chittenden County.                                                                       | Staff will utilize CCRPC connections forged during its ECOS Plan development to see what other entities are doing. |
|                                                                                                                                                                                                 | 87          | CCRPC, LEPC #1             | Identify Unmet Mitigation Data Needs         | Determine emergency organizations' and municipalities' data needs for hazard mitigation planning.                                                            | No formal action to date.                                                                                          |
|                                                                                                                                                                                                 | 87          | CCRPC, LEPC #1             | Determine Data Development Feasibility       | Determine which data gaps are feasible to fill given time and financial constraints.                                                                         | No formal action to date.                                                                                          |
|                                                                                                                                                                                                 | 87          | CCRPC, LEPC #1             | Data Development                             | Identify partners for data development process. Plan projects to address data needs. Seek funding for research projects.                                     | No formal action to date.                                                                                          |
| #7 Develop multi-partner public communications, outreach and education projects to improve the capacity of the general public and private sector to mitigate the effects of and endure hazards. | 88          | LEPC #1, CCRPC             | Shelter-in-Place Workshops                   | Develop and conduct Shelter-in-Place information workshops for schools, businesses, early childhood education centers and nursing homes.                     |                                                                                                                    |
|                                                                                                                                                                                                 | 89          | LEPC #1, VT 2-1-1          | Coordination with Vermont 2-1-1              | Strengthen coordination and partnerships with Vermont 2-1-1, in order to better communicate information to the public in an emergency.                       |                                                                                                                    |
|                                                                                                                                                                                                 | 89          | LEPC #1, CCRPC             | Communications, Outreach & Education         | Identify and implement projects to coordinate communications, outreach and education for emergency management and hazard mitigation.                         |                                                                                                                    |
