

# Winooski Parking Management Plan

Future Parking Demand and Management Strategies

September Project Meeting

September 22, 2021

#### **Agenda**

- Introductions
- Public comment
- Near term land use and parking changes
- Parking management and policies
- Schedule & Next Steps

# **Public Comment**

# **Near Term Land Use and Parking Changes**

#### **Near Term Land Use Growth**

300 new housing units in the near term (1,040 in study area today increasing to 1,343 in near term)

15ksq feet of non-residential space added (410 ksqft existing to 425 ksqft in future)

#### **Parking Spaces**

| Type of Parking<br>Space | Existing | Near Term | Change |
|--------------------------|----------|-----------|--------|
| Commercial               | 860      | 848       | -12    |
| On Street                | 892      | 888       | -4     |
| Residential              | 1,515    | 1,711     | 196    |
| Shared Off Street        | 261      | 581       | 320    |
| Totals                   | 3,528    | 4,028     | 500    |

#### **Parking Demand**

| Change in Parked Demand | 8:00 AM | 2:00 PM | 7:00 PM |
|-------------------------|---------|---------|---------|
| Commercial              | 5       | 6       | 5       |
| On Street               | 145     | 110     | 167     |
| Residential             | 98      | 81      | 121     |
| Shared Off Street       | 1       | 1       | 1       |

| Percent Change in Parked Demand | 8:00 AM | 2:00 PM | 7:00 PM |
|---------------------------------|---------|---------|---------|
| Commercial                      | 2.4%    | 1.5%    | 3.6%    |
| On Street                       | 42.0%   | 27.0%   | 50.4%   |
| Residential                     | 24.2%   | 24.2%   | 24.5%   |
| Shared Off Street               | 2.3%    | 2.5%    | 2.3%    |

**Commercial**: 100% non-residential lots unshared with other land uses.

On-Street: open and unreserved

Residential: off street lots available only to residential uses.

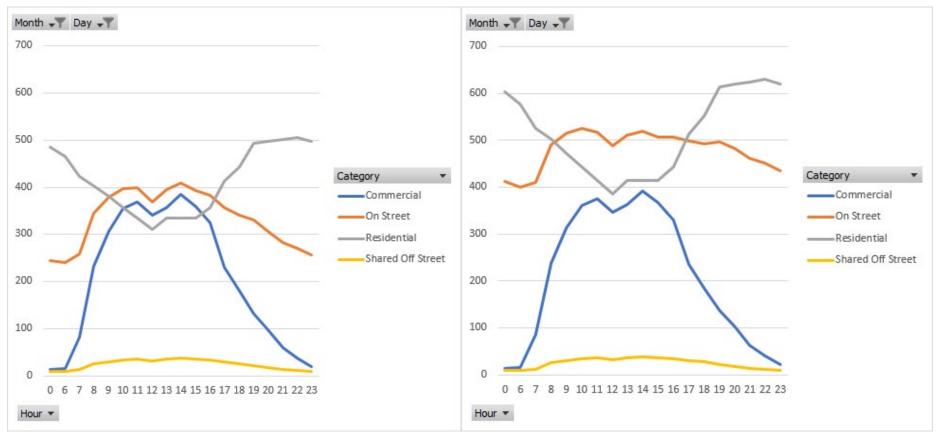

Shared Off Street: off street lots that are shared among several land uses.

# **Parking Demand**

#### **Existing Parking Demand**

#### **Near Term Parking Demand**

# Study Area Parking Supply vs. Demand

#### **Existing Conditions**

| Parking Lot Type  | Parking Supply | Demand at 8am | Demand at 2pm | Demand at 7pm |
|-------------------|----------------|---------------|---------------|---------------|
| Commercial        | 860            | 233           | 385           | 132           |
| On Street         | 892            | 345           | 409           | 331           |
| Residential       | 1,515          | 404           | 334           | 493           |
| Shared Off Street | 261            | 26            | 38            | 22            |
| Grand Total       | 3,528          | 1,008         | 1,167         | 977           |

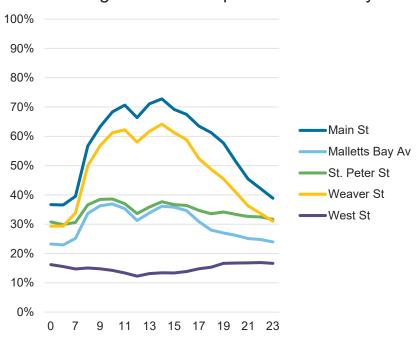

#### **Near Term Conditions**

| Parking Lot Type  | Parking Supply | Demand at 8am | Demand at 2pm | Demand at 7pm |
|-------------------|----------------|---------------|---------------|---------------|
| Commercial        | 848            | 238           | 391           | 136           |
| On Street         | 888            | 491           | 520           | 498           |
| Residential       | 1,711          | 502           | 415           | 614           |
| Shared Off Street | 581            | 26            | 39            | 22            |
| Grand Total       | 4,028          | 1,257         | 1,365         | 1,270         |

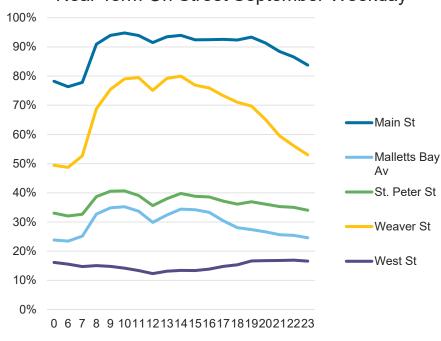

#### **On Street Parking**

#### Near Term On Street September Weekday

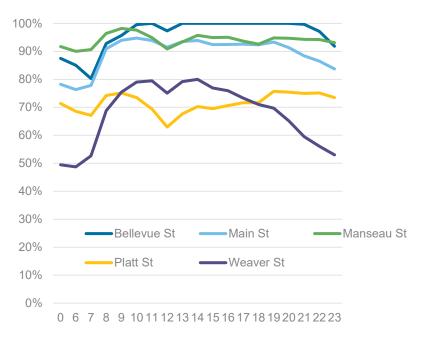

#### On Street – Likely Areas of Tension

These streets are seeing the highest rates of occupancy with the additional land use development.

- Bellevue Street
   (>50% increase in demand)
- Main Street (30-40% increase in demand)
- Manseau Street (100% increase in demand)
- Weaver Street during the middle of the day (30% increase in demand)
- Platt Street
   (30% increase throughout day)

#### Near Term On Street September Weekday

#### **Model Findings**

- In aggregate, only around 30% of the spaces are typically filled. However, some spots within the study area are in high demand and frequently are occupied more often.
- Main Street and side streets with unmanaged on-street parking start to fill up. An observed preference for easy onstreet parking is retained in the future parking model.
- As street parking starts to reach higher occupancies, off street lots may increase in use, beyond what's typically observed today.
- Side streets, particularly adjacent to commercial corridors may want to explore various policies to ensure resident parking needs are met.

#### **Next Steps**

- Compare parking rates in the model to city code.
- Initiate monitoring for streets and areas which are likely to see greater parking pressure. Develop guidance and process for maintaining records.
- Monitor changing demands for non-residential land uses coming out of the pandemic.
- Identify <u>policies</u> to improve long term management of supply and demand.

# Parking Management & Policies

#### **Policy Options**

- Maintain current regulations (require a certain amount of on-site and off-street parking which can be periodically revised)
- Reduce total demand (number of vehicles) being demanded by the users of the property by:
  - Implementing a sequence of Parking Management Actions.

# **Potential Parking Management Actions**

| "Low Cost"<br>Options   | Define On-Street<br>Parking Areas              | Designate<br>Loading/TNC Areas              |                                     |
|---|--|---|-------------------------------------|
| Zoning<br>Options   | Incentives for intrafacility shared use        | Incentives for interfacility shared use     | Unbundling price to mitigate demand |
| On-Street<br>Options  | Institution/<br>modification of time<br>limits | Installation of parking meters              | Institution of RPP programs         |
| Off-Street Options  Institution/ modification of parking maximums |  | Demand-<br>Responsive Pricing<br>Strategies |                                     |
| Intermodal<br>Investments   | Dedicated travel lanes                         | Supporting infrastructure                   | Supporting programs                 |
| Placemaking<br>Investments  |  | Streetscape<br>modifications                | Activated grade-<br>level land uses |

#### "Low Cost" Options

- Refers to political cost, not necessarily fiscal
- Commonly a 'first step' toward formalizing parking policy/operations
- Actions are necessary to provide clarity and order to constituents
- Actions typically enhance public safety and general traffic flow
- Fiscal cost is generally the only 'downside' to marking out authorized parking areas on public streets; consideration should be given the benefits of marking 'parking lanes' instead of parallel parking spaces, based on local vehicle fleet composition
- Designating parking areas for commercial vehicles (e.g., loading) and/or TNCs can reduce double-parking and/or 'infringement', but only works with active enforcement and works best with an online reservation system

## **Examples of "Low Cost" Options**

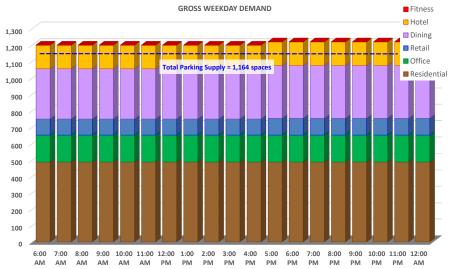

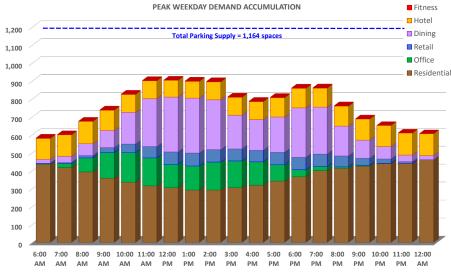

#### **Zoning Options**

- Create incentives for private developers to adopt more 'smart' and sustainable practices through zoning regulations
- 'Intrafacility' shared use is often encouraged by granting waivers if a developer can demonstrate all their parking need can be satisfied internally
- 'Interfacility' shared use allows developers to meet their requirements with the execution of an agreement to share parking with a nearby land use which has adequate capacity ("shared off street" in above examples)
- Developers which pledge to unbundle (and charge separately) for on-site parking may also qualify for a waiver

## **Shared Parking (Intrafacility) Example**

# **Shared Parking (Interfacility) Example**

City of San Diego • Development Services Department • Shared Parking Agreement

# **Shared Parking (Interfacility) Example**

## **Shared Parking (Interfacility) Example**

## **Unbundled Parking Incentives**

- Oakland, CA; Santa Monica, CA; Berkeley, CA; San Francisco, CA; and Seattle, WA have all passed zoning requirements mandating that any new multi-family residential units must rent/lease parking separately or allow residents to opt out
- Santa Monica has started to apply this to commercial developments as well
- Seattle has applied this to existing buildings when leases turn over
- Los Angeles's Adaptive Reuse Ordinance (ARO) permits developers to unbundle parking to encourage converting/redeveloping old buildings
- In communities of Winooski's size and scale, unbundling is allowed as an option to developers and may provide some credit towards parking requirements waivers associated with a larger TDM program

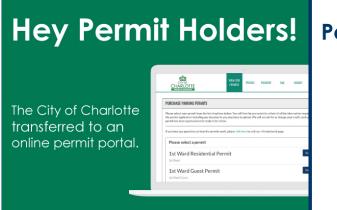

#### **On-Street Options**

- Commonly triggered when curbside occupancy is at 85% or greater capacity along a blockface for three or more consecutive hours on multiple days each week
- All mechanisms (time limits, metering, permit zones) exist to manage competing demands for available space
- Time limits and metering work to compel awareness of length of stay and encourage turnover
- Parking permit programs prevent migration from commercial to residential areas and improve the efficiency of enforcement efforts
- Active, consistent parking enforcement is critical

#### **Examples of On-Street Options**

#### **Permits Made Easy!**

Easily manage virtual permit accounts

No more office visits or standing in line

Track Permit History

#### **Off-Street Options**

- Parking maximums limit the amount of parking a developer can build on their site
- Demand-responsive pricing seeks to push parkers from areas of intense demand to areas of lesser demand (or into alternative modes)
- Both approaches assume a high degree of inelasticity in demand for area goods and services
- Both approaches are common in *larger urban centers* with inflated parking markets and substantial alternative mode infrastructure and offerings
- Most municipalities start with demand-responsive pricing adjustments reflecting the difference in demand for on- and off-street parking

## **Examples of Off-Street Options**

#### **Intermodal Investments**

- Focus of these initiatives is often on how to get people into the district/area by more sustainable means
- Programs which provide for dedicated travel lanes for alternative modes (i.e., bicycles, BRT, HOV, etc.)
- Programs which provide critical infrastructure to support alternative modes (e.g., park-and-ride facilities, bus stations/shelters, bicycle storage, changing/showering facilities, etc.)
- Supporting programs which address logistical issues (i.e., ridematching, car-sharing services, etc.) or barriers to use (e.g., 'free ride home' vouchers, bicycle repair systems/services, etc.)
- In all cases, a funding source must be identified and <u>vetted</u> with the community

#### **Placemaking Investments**

- Focus of these initiatives is often on how to get people to move across a district/area by more sustainable means
- Many studies cite the lack of grocery stores (i.e., 'food deserts') as a critical concern for developing urban centers into mixed-use environments
- Other critical land uses include childcare centers, schools, and medical/clinical service facilities
- Streetscape improvements support walking (e.g., wide sidewalks, effective lighting, etc.) and activity (e.g., space for curbside dining/shopping, events, etc.)
- Any kind of active grade-level uses improve perceptions of security and safety as well as vitality in a district (e.g., porches, benches, commercial kiosks, food trucks, etc.)

# **Schedule & Next Steps**

#### **Schedule and Next Steps**

#### Tonight – 21 Sept.

- Review parking model and where demand changes
- Review and discuss policies and
- Where those policies may be needed
- Feedback on policies

#### **Upcoming Committee Meeting - TBD**

**Deliverable:** Draft Parking Management Plan

- Comments on where and how policies may be enacted
- Process and approach for implementing
- Process for changing parking standards (how many spaces are required, etc.)

#### Final Parking Management Plan and City Council Meeting

#### **Jonathan Slason**

Director

Jonathan.slason@rsginc.com

#### **Andy Hill**

**Director of Consulting Services** 

President of New England Parking Council ahill@desman.com
