Electric Vehicle Charging Funds

VT NEVI Program

Plans for Next Procurement

NEVI Program Overview

- The National Electric Vehicle Infrastructure (NEVI) program is a federally-funded Investment in **EV Charging** Infrastructure from the Infrastructure and Jobs Act of 2021

- **Vermont was allocated $21.2M**, currently has 1 operational Fast Charger project and 8 more under contract

- **VTrans has $13M** remaining and plans to issue a second solicitation for up to 19 additional projects across the State

Next Steps:

- VTrans will provide information to share with potential **site hosts**.
- Sites will need 4-5 parking spaces for charging.
- An interested site host will fill out a simple survey.
- VTrans will connect respondents with a vendor.
- Vendor responds to RFP with support from site host
- Then there will be a Q&A period.
- Minimal costs to site host, such as attorney review of the site host agreement with the vendor.

Priorities for Sites

- Winooski and Williston listed as priorities in Chittenden County
- **Any site in any municipality may enter their interest to be connected with vendors**
- VTrans will be looking for shovel-ready proposals
- Sites need to be walkable to amenities, open to the public, and kept free of ice and snow
